Field of the Invention The present invention relates to a vehicle seat, and in particular to a vehicle seat with a special seatback structure for the seatback. 2. Description of the Related Art Japanese Laid Open Patent Publication Number Hei 11-238768 describes a vehicle seat with a special seatback. The vehicle seat comprises a seat cushion and a seatback. The seat cushion includes a seat back frame. The seat back frame has a top wall. The seatback is removably attached to the seat cushion. The seatback frame includes two backrest pillars and a backrest. The backrest pillars are attached to two sides of the seat back. The backrest is removably attached to the seat back frame. The seat back frame is detachably attached to the seat cushion by means of a buckle mechanism. The seatback of the above vehicle seat is provided with two pivot holes for pivotally attaching an actuating link. The actuating link is attached to a tongue plate, which is attached to a seat occupant. The tongue plate is pivotally attached to the pivot holes in the seatback. Thus, when the seat occupant is seated, the actuating link is pivotally attached to the tongue plate. The actuating link is pivotally attached to a seatbelt. The seatbelt is attachable to the seat occupant. However, the vehicle seat of the above publication does not have a structure that facilitates installation of the buckle mechanism. Therefore, the buckle mechanism is installed with a poor operation efficiency. The poor operation efficiency of the buckle mechanism can adversely affect the operation efficiency of the vehicle seat. Accordingly, there is a need for a vehicle seat that facilitates the installation of a buckle mechanism and that improves the operation efficiency of the vehicle seat.This invention relates generally to electronic ticketing systems and, in particular, to ca3bfb1094
